Invite the light inside!

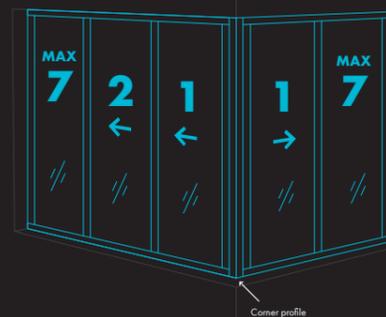

# Inspiring architecture

The trip to SoHo, the cradle of loft style, became an inspiration for the designers from CEZAR Design Lab. Charmed by the specific architecture, they decided to transfer one of its most important elements – the ubiquitous factory windows to our interiors.

And that's how PERSPECTIVE was created - the system of modular glazing. One simple idea inspired the designers: why don't we create a product that will let the light in in all the rooms and at the same time the character and the function will not be disturbed. The PERSPECTIVE glazing will connect all the rooms that used to be closed space or on the contrary – it will discreetly divide them. The installed product will change the atmosphere of the interior, making its character more industrial and modern. A slight change makes that the interiors are brighter and more pleasant.

## The concept for a corner

The corner profile allows to connect elements at an angle of 90°.

## Modularity = flexibility

The customers can choose appropriate width of the product, enlarged every 30 cm and two heights: 108 cm or 130 cm.

## Usability more than anything

The noise and scents are isolated from the rooms thanks to the system of window gaskets.

This is a significant asset that eliminates the kitchen problems.

## Do it yourself!

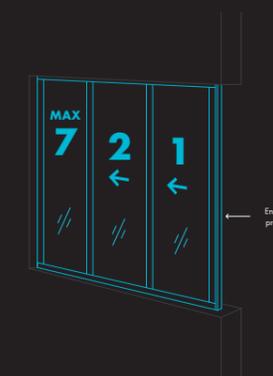

The system guarantees an easy and fast assembly. Even unexperienced user can install the product without the problem using the user-friendly instruction.

Most profiles are connected with "CLICK", screws are included inside the package. The products are safe and easy to transport. They are available in different sizes and meet the highest standards of security.

## Wall finishing

The finishing profile allows to install the product at the end of the wall.

## Colouring

WHITE  
RAL 9003

PEWTER  
RAL 9024

BLACK  
RAL 9005

## Why PERSPECTIVE?

Easy design  
Less components  
Faster assembly

Aluminium lighter than **50%**  
Good for the environment

Reduced environmental impact  
Less **CO<sub>2</sub>** emissions

Lower transport costs
